

EZI MAT

**A SUBSURFACE
IRRIGATION SYSTEM
FOR TURF AND
HORTICULTURAL
APPLICATIONS.**

WHAT IS EZIMAT?

EziMat is a subsurface irrigation system that works with capillary action. Specialised drip tapes emit water at the root zone aided by a specially engineered mat. The mat positions the tape for even water distribution using less water than sprinkler systems, keeping the soil at field capacity. This enables EziMat to operate legally in Stage 2 water restrictions. Roots penetrate the mat as EziMat waters the root zone and the subsoil adding additional stability to turf.

THE TOP 2MM IS
SLIGHTLY DRIER TO
KEEP WEEDS FROM

THE BENEFITS

KEEPS LAWN
GREEN

EVEN
WATERING

INCREASES LAWN
STRENGTH

ACTS AS A
WEED MAT

NO SPRINKLERS

ANTI-VANDAL

WATER STEEP
INCLINES

REMOTE
SCHEDULING

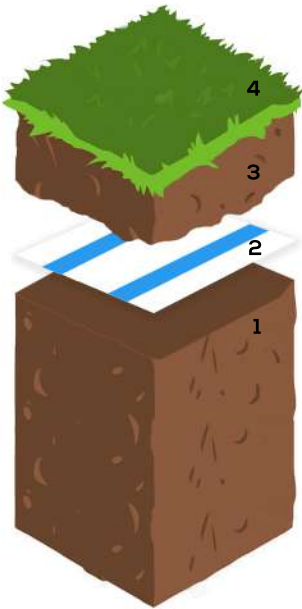

HOLDS BACK
EROSION

INSTALL EZI MAT

BEFORE YOU LAY TURF

1 Prep the area

2 Install Ezi Mat

3 Apply 60mm+ Soil

4 Lay the turf

Ezi Mat is installed before the soil is applied directly below the turf, as seen in the illustration above.

Note: When planning your lawn installation, be sure to install EziMat after the subsoil is leveled and prepared. Then apply 60-100mm + of soil on top of EziMat followed by the turf.

SPRINKLERS

Higher water use

Lawn unavailable when operating

Some areas greener than others

Tweaking spray coverage

Clogged spray heads

Water wastage on paths, walls and
run-off

Less water used with better results

24/7 use with Ezi Mat underground irrigation

Green uniformity throughout

No need, the whole area is watered evenly

Not an issue, all emitters are protected by the mat

EziMat irrigates sustainably in the root zone
